| Beta Product Launch | Q3 2019 |
| Community Building | Q4 2019 |
| End to End Testing | Q4 2019 |
| Security Audit | Q4 2019 |
| Main Product Launch | Q1 2020 |

Introduction

Money was introduced to allow people to trade goods and services based on a trust in the issuing authority. Nowadays, technologies such the internet, Blockchain and cryptocurrency allowed having ways for people to work together in a decentralized and peer-to-peer approach. Takafuly is all about where the community can share their services and exchange those services and products without the need for money and the intermediary.

Takafuly is a platform for sharing economy empowered by cryptocurrency. To enable wide variety and possibility of service exchange TAKAFULY marketplace is built with a cryptocurrency to allow cashless exchange of services yet providing flexibility in offering and using the services.

The problem: a non-transparent and corporate controlled economy

Entry for many current gig economy platforms is becoming not easy for the users, and most of these are built for the corporates to grow not considering its user base. Current gig economy platforms are fully controlled by the corporate owning the platform and there is where decisions get affected by the corporate directions that are not in favor of the community but in favor of the corporate. Furthermore, on these platforms the corporate charges both sides to offer an arbitration mechanism that is usually biased by the corporate decision for a more profitable business and ensuring transparency and fairness.

The solution: a decentralized community-owned marketplace

Users of the platform get incentivized all the way from publishing services to completing orders and for reviewing and certifying the reputation of others. Users can perform transactions using different cryptocurrencies, EOS and all EOS-hosted tokens. TAKAFULY Token is the staking token where all transaction fees collected will be issued as a dividend to all TAKAFULY holders based on their share.

The platform is completely owned by the users and even in cases of conflict, the whole arbitration mechanism is done by no middle man. Our arbitration protocol ensures fairness toward users and providers and rely completely on the community to resolve those conflicts.

Our Proof of Arbitration protocol brings some similarity to the EOS protocol with specific details on how arbitration and appeals can happen. The staked tokens in addition to a randomization process are utilized to select a jury to perform the arbitration process.

Token Mechanics

A token that puts the platform in the hands of its participants.

Payment: Takafuly is a multi-coin platform as users can opt to transact in EOS or any other EOS-hosted token including TKLY token.

Dividend: The transaction fee is used to cover platform OPEX in addition to be issuing a monthly dividend to TKLY holders.

Reward: TKLY holders can opt to register as an arbitrator and selected jurors for each case will receive an equal percentage of the arbitration fees.
